

# Membership

Smart Home America advises and educates federal, state, local, and industry leaders about integrating and implementing proven climate and disaster resilient loss mitigation solutions.

Through a coordinated, careful approach, we bring together the right people to develop tactics that enhance the resilience of single-family, multifamily, and commercial properties. The strategies we've crafted with public and private sector partners are used to increase equitable access to mitigation and climate resilient housing solutions. These solutions better protect lives, communities, and livelihoods from natural and human-caused disasters.

Our work takes us to State Capitals, Board Rooms, and construction sites. We're in communities convening leaders, community members, and experts to ground-truth what works, what doesn't, and what is needed. This work is necessary and catalyzes change. We're uniquely positioned to translate local knowledge and complex bureaucratic, scientific, and industry jargon to avoid misunderstandings and develop co-beneficial solutions.

“**Smart Home America is essential to successfully unlocking the power of people, businesses, and communities to better protect themselves against natural disasters.**”

**- Peggy Echols**

*Vice President Operations, State Farm®*

Hurricane Katrina changed how our founders viewed construction, insurance, and community resilience. They sought, found, and nurtured solutions like FORTIFIED construction to avoid that level of devastation again. In 2009, when we were founded in Alabama, the State had no FORTIFIED designations. Now, Alabama leads the nation in FORTIFIED construction, and Smart Home America works nationwide, with a growing list of requests for support throughout the country.

**In the past six years, we've been a catalyst for nearly 40,000 FORTIFIED Home™ designations and over 160 FORTIFIED Commercial™ and Multifamily™ projects.**

Join us in our advocacy and education efforts as we continue to reshape the way American and Caribbean communities build and rebuild. Together we will –

- Improve the risk profile of home and business owners to create equitable insurance access.
- Strengthen workforce and affordable housing to create community-wide economic resilience.
- Prevent damage that leads to community displacement and tax base loss.

Eligible for a board seat.	✓		

## What is FORTIFIED Construction?

FORTIFIED is a voluntary construction and re-roofing program designed to strengthen homes, multifamily, and commercial buildings against severe weather such as high winds, hail, hurricanes, and even tornadoes. It is a free resilient construction standard based on decades of scientific research by the Insurance Institute for Business & Home Safety. Third-party verification ensures that the upgraded construction materials and installation methods are used to meet the standards required by the FORTIFIED program.

FORTIFIED Homes, businesses, and multifamily developments have withstood Hurricanes Ida, Sally, Michael, and Dorian with minimal damage. Approximately 95% of FORTIFIED structures experienced little to no damage based on preliminary data. Homes and businesses built to FORTIFIED standards lower insurance rates for owners in many states.
